Execucvue Business Intelligence... the power to make more profitable decisions.

Execucvue is a web-based hospitality business intelligence application for large and small hotel companies that gathers and coordinates data from a wide variety of corporate systems, including Smith Travel Research, into accessible, easily understood information with familiar browser commands. Execucvue gives hotel executives the power to make better decisions daily by providing fast and easy access to key operating information.

Strengthen your Decision Process

Execucvue provides instant, flexible access to most sources of property and corporate data. It quickly integrates, organizes, and consolidates large amounts of raw data into useful reports and performance dashboards that facilitate better business decisions.

Web-based Technology

Execucvue is Web-based so you are free to focus on your business, not technology. Whether you are located at corporate headquarters or work remotely using a PC, laptop or BlackBerry, Execucvue can send and receive the operating information you need to make the rapid business decisions that count.

Execucvue users perform complex analysis with ease to get to the "why" behind the data or actions to uncover trends and operational "hotspots" to improve performance and keep their businesses ahead of the industry.

With Execucvue, you can analyze what drives your business by analyzing property data organized in logical categories – such as fiscal periods, brands, and geographical regions.

Guiding Metrics

Execucvue can also graphically compare your latest performance against your closest competitors using Smith Travel Research Data.

RevPAR, labor, energy, and other costs can change rapidly and demand quick response before they impact the bottom line.

Execucvue eliminates most re-keying by quickly attaching to and, on demand, organizing any desired combination of operational, accounting, quality control and industry data for bottom line brilliance.
